

CareInsight in a nutshell

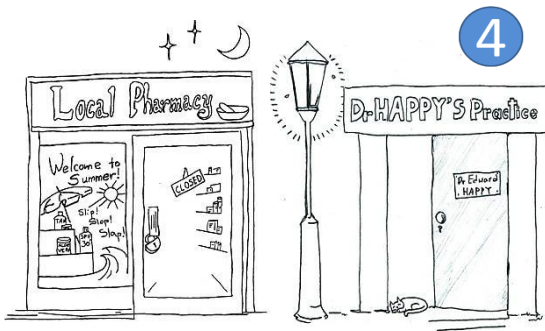

A patient arrives at a hospital **Emergency Department** or, is seen at an **After-Hours** facility or service

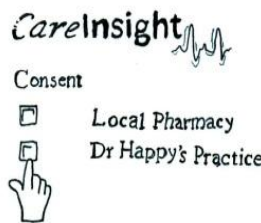

The **patient** agrees for their primary care medical summary card to be viewed from practices attended over the past year

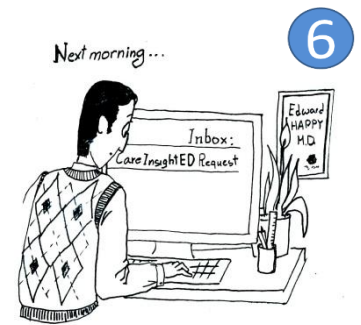

At ED/AHs an **authorised clinician** looks up the patient primary care record, using the patient's unique identifiers (or a name verification)

Within **seconds**, *Care Insight* connects to all participating practices and pharmacies and looks up where the patient has been registered and/or seen recently

Care Insight presents a list of practices (and pharmacies) where a record of the patient has been found (and seen recently). The patient (or NoK) then needs to **consent** for the records to be viewed

Each GP practice is **notified** that a patient record on their system has been accessed
